

# Non-Functional Requirement

Section	
Status 1	Not started

## 1. Performance

| As a user, I want the system to load any page within [...] seconds so that I can access information quickly without delays.

---

## 2. Security – Authentication

| As a registered user, I want to log in securely using username and password / two-factor authentication so that my account is protected from unauthorized access.

---

## 3. Security – Authorization

| As an admin, I want role-based access control so that only authorized users can perform certain actions in the system.

---

## 4. Usability – Responsive Design

| As a mobile user, I want the application to adapt to any screen size so that I can use it comfortably on any device.

---

## 5. Reliability – Uptime

| As a customer, I want the system to be available [...] hours/day and [...] days/year so that I can use it whenever I

---

need.

## 6. Maintainability

As a system administrator, I want the application code to follow clean coding standards so that maintenance and updates are easier.

## 7. Data Backup & Recovery

As a data manager, I want the system to back up all critical data automatically every [...] hours/days so that information can be recovered in case of failure.

## 8. Scalability

As a business owner, I want the system to handle up to [...] concurrent users so that performance is not affected as usage grows.

## 9. Audit & Logging

As a security auditor, I want all important actions to be logged with timestamps so that I can track activities and investigate issues when needed.

## 10. Compliance

As a compliance officer, I want the system to follow [...] regulations/standards so that the organization meets all legal and industry requirements.
