Thẻ 1

With rapid advancements in technology recently, particularly in generative technologies that use Artificial Intelligence (AI), many people wonder whether students still need to learn to write or if they could just delegate their writing assignments to natural language processing (NLP) models that are capable of generating human-like text, such as ChatGPT.

Write an argumentative essay of about 400-450 words to express your opinion on the above issue. Support your opinion with relevant supporting ideas, details, and examples, drawing from diverse contexts, such as personal experiences, academic settings, or current events. A counterargument should also be added.

Why we need to learn to write? - report, graduation thesis, structure, express idea in a professional way, benefit your future career such as writing an email
Benefits of AI tools? time-saving, gather related information to generate a perfect essay, support our learning by checking, improve writing quality , help us choose natural vocabulary
Risks of over reliance on AI? - lacks of ideas, the ability of critical thinking decreases, plagiarism (đạo văn), Turnitin => AI generated essay =>academic result

Body 1: Importance of writing skills
First of all, learning to write plays a crucial role in developing a student's critical thinking and communication skills. Writing is not only used in the educational environment but also in our further career pathway. For example, when we are in school, we should learn how to write a graduation thesis, whereas in an office environment we need to learn to write an email in a professional way. Furthermore/ In addition, when students learn to write, they will know how to analyze problems and express ideas smoothly, which are essential skills in both academic and professional settings
Body 2: Benefit of AI tools
On the other hand, AI tools such as ChatGPT or Copilot can be extremely useful in supporting student's writing. These technologies can help students generate ideas, create a suitable/appropriate structure for writing assignments,which is time saving. In addition, it also supports students by checking grammatical errors and helps them choose natural vocabulary, which improves their writing quality. For instance, students who are beginner or struggling with writing can use AI to get instant feedback on their essays instead of waiting for their teachers. In my opinion, if students can use AI effectively, it is certainly a mighty tools in improving writing ability.

nowadays AI is a mighty tool for every student in research and study, especially in the educational environment. That causes to the issue is that if people use this tool in an abusive way, is it necessary to learn how to write with original writing tools like pen or pencil? while people discuss about this issue, we can not deny the power of the artificial intelligence and its ability to generate the plain text like human. This essay will discus both idea between keep using artificial intelligence or still learn writing as parallel way.

In recent years, there has been a growing concern about with repaid advancement in technology recently, particularly in generative technologies that use Artificial intelligence (AI), many people wonder whether students still need to learn to write or if the could just delegate their writing assignments to natural language processing models that are capable of generating human-like text, such as ChatGPT. While some people argue that learn to write, others believe that they could just delegate their writing assignments to natural language processing (NLP) models that are capable of generating human-like text, such as ChatGPT.e.g.. This essay will discuss both views before arguing that we should write the essay ourselves or use Artificial Intelligence (AI). **Chiến**

In recent years, artificial intelligence tools have developed rapidly, and they are able to produce text similar to humans' writing. This makes many people wonde if student todays still need to learn writing or they just should give all the writing tasks to Artificial intelligence (AI). This essay will analyze both aspect of learning to write, and try to make clear if students should keep this skill or rely completely on Artificial intelligence (AI). *Trâm

It is true that/ it is a fact that scientific technology develops day by day. One of those things is Artificial Intelligence, which may help people in all fields. In education, a lot of people believe that students shouldn't be dependent on AI such as ChatGPT, Copilot for writing tasks, and that students should write by themselves . In this essay we will discuss both sides and give an opinion on this problem. *Dũng

Recently, with the rapid advancements about the technology, especially for Artificial Intelligence (AI), many people think that learning writing skills is still necessary for modern students. This essay will describe all the pros and cons of using Artificial Intelligence (AI) for assisting them to take their writing assignment, and show that it is necessary to write their assignment all by themselves instead of focusing too much with Artificial Intelligence (AI) *An

Risks of over reliance on AI? - lacks of ideas, the ability of critical thinking decreases, plagiarism (đạo văn), Turnitin => AI generated essay =>academic result

On the other hand/ However, On the contrary, abuse/ the overuse of artificial intelligence will reduce the building skills in how to construct an essay. With high speed to execute every request or every command from users, chatGPT or copilot now appear in every single essay in universities. Furthermore, AI tools are built to find and collect anything it can find. If we use this tool too much we can be stolen the idea and even the whole work and study process or even worse, we can rapidly increase the percentage of plagiarism which is not allowed in every essay in information generation. Moreover, students using AI often use/ collect the result from this tool that means if they do not double check the result AI generated, it can lead to dramatically decrease the ability of critical thinking, the most important skill with every student.

In conclusion, despite the usefulness of AI tools, students must study the writing skills to keep the ability of critical thinking and understand how to build/ construct a good essay. Moreover, students need to learn how to control the advantages and disadvantages when using intelligent machines during studying at universities.*Trung

However, relying on Artificial Intelligence too much for writing assignment can have so many risks. Firstly, you will lack the ability of thinking ideas and your critical thinking skill will be lower. Secondly, your writing will be easily considered as plagiarism. The modern teachers have so much experience, and now they can even check your work by some websites like Tumitin, Grammarly, Small SEO Tool, and more, so that they can realize which is done by themselves and which is not. If your work is considered as a plagiarism by the marker, your academic result will be strictly affected. So that, we need to control the amount of using Artificial Intelligence (A.I) to support when we use this for your work

In conclusion, while using Artificial Intelligence (A.I) to support learners writing their assignment is time saving and convenient, writing is still an essential skill that needs to be learned. However, we should be aware of the pros and cons of using them to control and using this effectively, not only just for their assignment, but also their learning journey

Body 3: Dũng
However, there are some negative points when students are dependent on using AI in writing. We can see that students may lack ideas and the ability of critical thinking skills decreases because AI does everything you want, from generating the ideas, creating a suitable structure for writing assignments to checking the mistakes. Moreover, if you submit

the writing assignments which are generated by AI, your exam may commit plagiarism and your score will not be high enough to pass the course.

In conclusion, although AI tools can assist you greatly in writing tasks, students need to practice to write by themselves. Writing develops crucial thinking, creativity and clear expressions, which AI can not do. While AI can serve in medicine, factories and so on, over-reliance on it may have a risk in thinking independently. Therefore, student should use AI as supporting tools so that they can think critically in the AI era.
can/might
AI can/will decrease

Body 3

However/By contrast, In my view , the idea that students still need to learn to write is more convincing. This is because if artificial intelligence (AI) were to write the essay, it would lead to students lacking ideas or the ability of critical thinking decreases. For instance, If students write it themselves, it will benefit their future careers, such as writing emails, essays, or reposting, giving it to Artificial Intelligence (AI) could lead to plagiarism. As a result, I firmly believe that students still need to learn to write.

conclusion

In conclusion, although there are persuasive arguments both for and against, students still need to learn to write more convincingly or students shouldn't be dependent on AI such as ChatGPT,e.g.., I believe that each type has its advantages and disadvantages. Ultimately, depending on how the student uses it, Ai can be a mighty tool but also a risky one/ Ai can be considered a double edge swords,
