

Intro: paraphrase
plays a crucial role in students' decision-making process in choosing university
This essay will argue the influence….
Intro:
It is true that university rankings have played a crucial role in students' decision-making process in choosing university for many years. Many students rely heavily on these rankings as a measure of university's reputation and academic excellence/ academic quality. However, while rankings can provide useful guidance, they are not always a perfect indicator of educational quality. This essay will examine their impact on students decision-making and evaluate whether they reflect true academic standards or not.
Body 1: The impact of university rankings
prestigious => rumours argue that: high quality education, high quality infrastructure, active studying environment => career opportunities
Relationship, interact with talented pp => support students in studying or even further career pathway
Overlook important factors: locations, tuition fee, learning environment, personal preferences/ personal interest => reduce motivation

On the one hand, university ranks are a talent attraction source when the ranks can reflect the quality of each university. The more time it takes to educate every generation, the more quality each university can have. High quality education and high quality infrastructure or even active prestige can affect career opportunities. With high ranking, universities can get relationships with skilled individuals can become a support for students in studying or even further their career pathway. However, location and tuition fee with learning environment and personal interest can change the motivation of students. * Trung

On the one hand, university rankings have a high impact that students can decide which university they want to study. Some rumors argue that a university which is always on the top rank of all universities in the world can provide high quality education, quality infrastructure and active studying environment, so that will be a nice step for their career opportunity in the future. Furthermore, studying/enrolling in a high quality university will have a chance to make a relationship with talented people. They may support students in studying or even further their career pathway. Nevertheless, we need to look at some important factors such as locations, tuition fee, learning environment, and personal preferences, which are important that affect students' motivation. *Dũng

On the one hand, university rankings have so many powerful impacts for young citizens. There is a fact that the higher quality education, quality infrastructure, and studying environment, the more career opportunities that universities provide for students after their graduation. Participating in the top university, the young residents can have many chances to interact with many talented, professional people, who can be the most useful supporters for their learning journey or their job pathway. However, the location, the fee, etc can be the factor for reducing the motivation of students. *An
However, students should not overlook the other factors, such as location, tuition fee, learning environment, and personal preferences to keep their motivation

On the one hand, university rankings play a significant role in guiding students' decisions. Universities with high rankings are often seen as more prestigious, so students believe they can receive better education, modern facilities and a positive learning setting. As a result, many students expect better job opportunities after graduation. In addition, studying at well-known universities allows students to meet talented classmates, which can help them in both their studies and future careers. However, focusing too much on rankings may cause students to ignore other important factors such as location, tuition fees, learning environment and personal interests. This may lead to a lack of motivation if the university does not suit them. *** Trí

First of all, university rankings have direct influenced in students' decision-making process by signaling prestige and perceived academic excellence. Many individuals believe that highly ranked universities offer better teaching, modern facilities, and active learning environment. Because of this, students study in these universities may have more career opportunities in the future. In addition, these universities often attract talented students and experienced teachers, which helps students build useful relationships for their studies and careers later. However, focusing too much on rankings can make students ignore other important factors such as location, tuition fees, learning environment, and their own interests. This can reduce their motivation if the university they choose does not really suit them.
On the other hand, university rankings are not always a reliable measure of academic quality. Many rankings focus on generalized factors such as research output, reputation, or international visibility/status, which may not reflect the actual learning experience of students. For example, a highly ranked university may not guarantee good teaching quality or personal support for every student because it pays much attention to notable factors that directly affect a university's prestige. In addition, rankings often ignore crucial aspects like

class size, teaching methods, or student satisfaction. As a result, students who only choose universities by rankings may feel disappointed if their expectations are not met. Therefore, while university rankings can be useful, they should not be the only factor in a student's decision-making process. * Như

Body 2: not always a reliable measure of academic quality (chất lượng học thuật).
weak curriculum program in some specific fields of study
learning environment => get on well with new friends => reduce academic performance
student satisfaction => Rank cao nhưng ko tiếp thu ý kiến => academic quality fail to receive accurate assessment
Faculty: khoa, viện
Major/field of study: lĩnh vực, ngành học
specific major ko nhận đc sự đầu tư => weak curriculum program
incomprehensive: ko toàn diện

On the other hand, it is true that nothing is 100%/ completely perfect and so is the high ranking university. In some specific fields of study which do not receive much investment from university. As a result, the weak curriculum program may affect students in learning. Moreover, although the learning environment is good, students can't concentrate on studying because they get on well with new friends, have a part-time job to earn money or don't want to absorb teachers' feedback. These reasons play a significant role in reducing academic performance and student satisfaction. * Dũng

On the other hand, university rankings are not always a reliable indicator of academic quality. Many ranking systems focus heavily on research output and reputation rather than teaching effectiveness. As a result, some highly ranked universities may have weak curriculum programs in certain fields of study because they tend to prioritize research activities over teaching quality. In addition, the learning environment may not always be suitable for every student. For instance, students who fail to adapt socially or academically may experience lower satisfaction and reduced academic performance. Therefore, even though a university may rank highly, it does not guarantee a positive learning experience for all students.
*** Trí

On the other hand, university rankings are not always a reliable measure of academic quality. While some schools have some fields of study which have a very good curriculum quality and learning environment for learners to improve their skills and knowledge, there are also some majors which are very poor in supporting, incomprehensive programs, making them not suitable places for students. In addition, the head of the high-ranking university has their "Ego" very high. They are not willing to receive any feedback from learners to improve the weakness of their school, which making students feel not happy. **An**
administrative depart ent => procedures => unhappy students => academic quality

On the other hand, rankings are not always a reliable measure of academic quality. Some university focus heavily on the major which are their strength. As an result, some specific field of study may have a weaker program. If university have weak curriculum program in some specific fields of study, it may affect to the learning process of students. Moreover, the learning environment are not suitable for every student. If students get on well with new friends, they can reduce the effectiveness of the learning process. Chairman of some universities may not pay attention to feedback from students to improve the weak point, which can lead to the falling of trust between students and university *Trung
